**Ref: Restoring America's greatness through proper energy policy with Israel's involvement;  
Presentation for Mr. & Dr, Adelson: <http://fuelrfuture.com/adelson-invitation/>**

Dear Mr. & Dr. Adelson:

I am writing about a matter of profound importance to America, Israel, worldwide stability, and mankind's prosperity. The issue is abundant, inexpensive energy which is required if all people in the world are to live happy productive lives. Today the issue of energy has been hijacked by the UN and its Agenda 21 based unspoken goals to [destroy worldwide capitalism, limit available energy](#), and advocate for enormous worldwide population reduction over the next century.

**Background:**

The UN and its IPCC have been using anthropogenic global warming (AGW,) aka climate change, to drive the corrupt Green Energy Scheme leading to the ultimate reduction of available per capita energy in the U.S. through EPA and state regulations. Furthermore key government officials have called for disinvestment in fossil fuel and energy companies by government pension funds and universities. Such complacency by our government is despicable and will [lead to the death of millions of people](#) in time.

As I explained to Governor Mitt Romney in a meeting in July 2012, the [fastest way to bring a country to its knees](#) is to deprive its citizens of inexpensive plentiful energy.

We propose to expose this scheme to the American public before the next election thereby undermining the credibility of the entire Democratic Party who is clamoring to the AGW-climate change scare tactics and diverting hundreds of billions of dollars to green energy companies, consulting firms, and political causes.

More importantly we will teach people that solar, wind, geo-thermal, bio-fuels, and the like are total narishkeit when it comes to baseload power. This is true for both developing nations and most certainly for energy hungry advanced nations.

My recent article with co-author Paul Driessen, [\*"The Green Mirage-and Con Job"\*](#) explains how people like Tom Steyer, George Soros, and other liberal billionaires have aided folks like Elon Musk, Eric Schmidt, and their fellow captains of the new elite green energy firms to acquire billions of dollars to pursue energy solutions that simply don't work. Worse yet the media has been purchased by them to give American citizens a false sense of security based on this green nonsense.

Google, perhaps the kingpin of green energy advocacy and subsidies, recently attempted to come clean when two of its Ph.D. [scientists wrote an article](#) saying green energy as we know it today does not and cannot work.

None other than Bill Gates has [recently stated that these green solutions](#) are totally inappropriate for baseload power and he calls for far greater funding for renewable research, saying investment "should be like the Manhattan Project and the Apollo Project in the sense that the government should put in a serious amount of R&D." He pointed to the drawbacks of now-commonplace technologies like solar, which can only provide power during the day.

"There's no battery technology that's even close to allowing us to take all of our energy from renewables and be able to use battery storage in order to deal not only with the 24-hour cycle but also with long periods of time where it's cloudy and you don't have sun or you don't have wind," he said.

To be very clear, we must not spend needless money on AGW-climate change issues today. It is a non-issue over the next 2 to 3 decades.

We must not limit coal, oil, and natural gas production. In fact we must increase production of fossil fuels in the U.S. And we must foster a rebirth of modern, safe, nuclear energy as called for by Bill Gates and other leading experts as a bridge to fusion energy in the future.

Please note that I am an internationally recognized expert in the area of fusion energy development science, history, and politics. My 2009 [\*"Who Killed Fusion?"\*](#) article has been cited by all the fusion laboratories and scientific community and has been translated into several languages [including Hebrew](#). The Hollywood icon, Pat Boone, and I have written a series of 8 articles based on ***"Who Killed Fusion"*** as published in WND & NewsMax for the popular conservative audiences. These too have been translated into Hebrew and are indexed in English and Hebrew on a [Pat Boone section](#) of our Website.

### **Problem:**

The liberals and the Democratic Party will continue the green energy corruption scheme at the expense of national security and will use it as a divisive tool to alienate Americans from the Republican Party.

The liberals and the Democratic Party will provide citizens with a false sense of security regarding our energy future based on the nonsensical notion of "simply going green."

The liberals and the Democratic Party will do irreparable harm to future generations of not only Americans but all mankind by stalling the necessary scientific and engineering work need to correctly solve energy.

## **Our Solution:**

### **I Green energy and AGW corruption:**

Our colleague, Christine Lakatos, has [compiled over 5 years of research](#) in AGW and green energy corruption. She has written over 70 detailed well published articles which we are compiling into the Green Corruption dotcom Website as well as a relational data base.

- Facts for conservative republican candidates will be summarized and policy briefs written over the next 6 months.
- The data base will be integrated into the EnergyCite® Power R Future interactive video game sets.
- A book tentatively titled *“Green Energy; Dirty Money”* is planned for a spring 2016 release exposing AGW-climate change originating from the UN Agenda 21, driving the green energy scheme, and hundreds of billions of dollars in government and corporate corruption.

### **II Interactive action energy resource video games:**

- We will develop and [market hit video game sets](#) based on [energy resource management](#) with a “save the future of the world” theme. Must release at least 2 months prior to 2016 election.
- Games will allow players to discover green energy is a hoax and that fossil fuels are needed for next 3 to 4 decades along with increased nuclear.
- Games will allow players to discover the future of energy; fusion energy.
- Games will tie into corruption data base and will allow players to discover “we have been had” by politicians and green energy leaders.
- Our game development is in collaboration with a seasoned leading game developer.
- Key pieces of the games and energy data base will be developed in Israel.
- To be supported by two books written for us in Israel:
  - [Gerald Schroeder, Ph.D.](#), *“Fusion; God’s Choice for energy.”*
  - [Shalom Eliezer, Ph.D.](#), *“A guide to Energy and fusion science for non-scientists & the rest of us.”*
- Plan to launch a high quality well produced Kickstarter crowd funding campaign to fund game development and pre-market. Kickstarter [program will be designed](#) to raise a minimum of \$5 million USD.
- Game ties into homeowner’s electrical smart meter to help [save money by providing real time use, and cost information.](#)
- Most large utilities will embrace the games; utility executives know green energy is inappropriate for baseload power and utilities are in the green energy/media/regulatory agency hot seat.

### **III EnergyCite® Smart Meter IP licensing:**

- We have [key patents](#) on the now ubiquitous smart meters used by utilities across the nation.
- Patents cover the utility’s billing system connected to utility meter.
- Patent holder is [entitled to license fees](#) from utility company.
- EnergyCite will generate \$200 million to \$600 million annually in license fees.
- Most of the net revenue will be invested in the EnergyCite® consortium fusion energy development project.

#### IV Fusion Energy Development:

- The U.S. Department of Energy & its predecessor agency, the Energy Research and Development Administration, or ERDA has long known that the solution to energy is the development of fusion.
- There is currently no political will in the government to fund fusion programs in the U.S.
- China, South Korea, Japan, and the EU all have more robust fusion programs than the U.S.
- The EnergyCite® Consortium plans to organize, fund and manage a fusion program to successfully demonstrate fusion within a decade and to lay out a commercialization plan within 2 decades.
- Funds generated by the EnergyCite® IP licensing will be augmented by consortium members consisting of major petroleum, coal, energy, and defense contractor firms who will have access to the fusion IP and scientific know how.
- Initially a [PJMIF fusion approach](#) will be pursued in the U.S. in [partnership with Los Alamos National Laboratories](#).
- An experimental facility will be built in Ariel, Israel in conjunction with the Ariel University where the actual [experimental work and demonstration fusion reactor](#) will be built.
- Why Ariel? Because it falls outside the State of Israel's regulatory coverage which enables science to be conducted much faster than in the US or Israel proper with associated bureaucratic red tape.
- As [explained to Israel's Prime Minister Netanyahu](#), Israel must develop and demonstrate fusion. The U.S. has failed due to poor management and external influences. This becomes the Manhattan project and 21<sup>st</sup> century Apollo Moon Project to be successfully concluded in Israel.
- Israel demonstrates that while its neighbor Iran is intent on using nuclear technology to destroy; Israel is a light to all nations who uses the wisdom given by God to [understand inner space](#) (E=MC<sup>2</sup> conversion of matter into energy.)
- Israel demonstrates responsibility to the world by exploiting the Leviathan basin and [Tamar natural gas fields](#) now knowing the life span and revenue stream is finite (30 years) while at the same time investing in the future when the gas is no longer economically viable to pump.

Mr. & Dr. Adelson, it is imperative that we move forward with this project at once. Please see our presentation prepared for you at: <http://fuelrfuture.com/adelson-invitation/> We are in need of modest funding now to move forward. We are open to investment, loan or grant. And let me stress we are building a profitable enterprise. I would like to come to Las Vegas and meet with you as soon as possible to discuss our needs given the tight time lines we must operate in.

Please have someone contact me at 916-482-2000 Ext. 142 or 916-482-2020 cellular. Thank you for your consideration.

Sincerely,  
**USCL Corporation,**

Tomer (Tom) Tamarkin  
President
