Mr. Jeff Bezos
Amazon.com
Bezos Expeditions
1200 12th Ave. South, Ste. 1200
Seattle, WA 98144-2734

Dear Mr. Bezos:

As a pioneer funding the new generation of magnetized target inertial fusion you are very much aware of the need for fusion as fossil fuel reserves tighten. Additionally, the migration to fusion and synthetic fuels produced through fusion puts to rest AGW concerns. Our fusion energy elevator speech sums this up very succinctly at: <http://fuelfuture.com/elevator-speech/>

Our latest published article ***“Fusion Energy; Too Important To Fail – Too Big To Hoard”*** at <http://fuelfuture.com/fusion-energy-too-important-to-fail-too-big-to-horde/> points out that fusion is a very arcane subject to the general public, politicians, and many scientists outside the fusion community. General Fusion is one of the star start-ups used in my article as a case in point.

Pat Boone in Hollywood, and I are demystifying fusion and the need to develop it and commercialize it soon. The **Time Magazine** article on fusion as published Friday <http://fuelfuture.com/inside-the-quest-for-fusion-clean-energys-holy-grail/> shows that private enterprise fusion firms have the potential of demonstrating and even commercializing fusion before ITER <https://www.iter.org/> finishes its regimen of experiments. Your involvement and General Fusion are highlighted in paragraph 5 of the **Time** article. The New York Times published a similar article Sunday at: <http://fuelfuture.com/start-ups-take-on-challenge-of-nuclear-fusion/>

Fusion in many ways is the exploration of inner-space. The **Time** article mentions Dr. Rostoker’s (founder of Tri-Alpha Energy) insistence that research with high energy particle accelerators would have led to quicker fusion. Unfortunately the U.S. gave up

its lead in high energy physics when it canceled the superconductor collider center in Austin Texas in the early 1990s.

Our intent is to make the exploration of inner-space and the development of fusion America's project. The moon landing of the 21st Century if you will. We want all Americans to be involved.

We plan to produce a hit electronic interactive game called **PowerMasters™**. The monetization and revenue model is based on Candy Crush Saga. This is described on our EnergyCite® website at: <http://www.energycite.com>

Revenues from the games along with significant revenues resulting from licenses granted to utility company's nationwide to practice our patents covering the "utility smart meter" [see: <http://energycite.com/ip.php>] will be invested into a fusion energy consortium as described in the concluding section numbered points 1-14 of the Tamarkin article mentioned above <http://fuelfuture.com/fusion-energy-too-important-to-fail-too-big-to-horde/>. Company's such as General Fusion would have access to these funds.

The video game franchise will be a winner in the business sense. As importantly they will create tremendous societal value teaching people important lessons in science, energy, money and values.

We plan to produce, manage, and launch a first class Kickstarter campaign which will rival the top producing Kickstarter game campaigns in capital: <http://fuelfuture.com/38-of-the-top-crowd-funding-projects-for-june-2015-are-games/>

We have prepared a unique financial offering to finance this early stage of the project which in essence is a high yield company note(s) syndicated as a private bond. The offering is presented at: <http://energycite.com/opportunity.php> . Of course we have flexibility in dealing with high net worth individuals and or company's such as Bezos Expeditions who may elect to fund our entire and modest needs.

Finally, in so far as Amazon.com is concerned, we have flexibility assigning distribution rights for certain aspects of the game series including but not limited to units associated with the interconnection to the home owner's smart meter.

Would you please acknowledge receipt of this email and let us know ASAP what more information we can supply you in order to make this project happen. It is important to all of us and for our country. It is such an important issue that Pat and I have raised it to the attention of world leaders, and most recently Pope Francis, as a solution to his call for better planet stewardship and the upward rising up of poor nations worldwide: <http://fusion4freedom.us/letter-to-pope-francis/>

Thank you.

Sincerely,

Tom Tamarkin
